

Hydrocortisone experiences a price hike

Several presentations of hydrocortisone have seen their average generic prices almost double in the past month, putting them on top of the table representing the fastest price risers since April (see Figure 3). And price deals were off for omeprazole capsules as the lowest-available prices leapt forward (see Figure 1).

Independent retail pharmacists and dispensing doctors were paying on average up to 95% more in May for hydrocortisone cream. Its lowest prices also rose, indicating general shortages.

However, hydrocortisone still has some way to go before it emulates amlodipine, which cost more for pharmacists and doctors

in England and Wales to buy in April than they were reimbursed by the government for dispensing it (*Generics bulletin*, 8 April 2005, page 14). Closest to the Drug Tariff price was hydrocortisone cream 0.5% in the 15g size which cost £0.60 (US\$1.10) on average in the market compared with £0.80 in the Drug Tariff.

The statins, meanwhile, continued their price declines, bringing closer the day when simvastatin 10mg tablets can be bought for £0.01 each. Average ciprofloxacin prices also took a tumble, although the falls were not always reflected in the lowest prices available (see Figures 1 and 2).

PRICE WATCH UK highlights generics price changes in the UK market and appears exclusively in every issue of *Generics bulletin*, courtesy of the Pharma TouchStone service of WaveData.

WaveData collects and collates pricing information from a number of European countries. In the UK, pricing information about generics, brands and parallel imports is gathered from offers made to independent retail pharmacists and dispensing doctors by wholesalers and generic manufacturers. WaveData

collates this data and publishes the results as its Pharma TouchStone service. This is designed to give customers of the service fast, accurate, real-time access to current generic prices.
